

Portfolio Overview

In order to reach net zero emissions by 2050, a cost of carbon needs to be imposed on emitting companies. Let's assume that the cost of carbon is set at 300€/ton, highly emitting companies will need to bear this cost which will be reflected in the price of their shares.

New investment strategies will aim to limit the CO2 intensity of a portfolio thus underweighting stocks with high carbon footprint compared to the benchmark.

To correctly attribute the performance of such strategies, we need to distinguish the “**carbon effect**” from traditional allocation and selection effects. This novel attribution methodology is detailed herein.

Top 5 Carbon Footprint

Asset	wP (%)	Contribution
IMERYS	1.24	1,214
SOLVAY SA	0.79	824
CRH PLC	0.33	300
ACCOR SA	1.50	298
RENAULT	2.30	283

Top 5 – Carbon Saved (vs. Bench)

Asset	wP	wB	Return	Excess Carbon
IMERYS	1.24	3.93	-11.08	2,178
CRH PLC	0.33	2.37	-0.75	1,834
ENEL SPA	0.07	5.83	7.22	1,636
SAINT GOBAIN	0.18	1.71	2.05	671
AKZO NOBEL	1.02	1.66	0.00	152

Top 5 – Carbon Wasted (vs. Bench)

Asset	wP	wB	Return	Excess Carbon
SOLVAY SA	0.79	0.28	-2.07	-544
ACCOR SA	1.50	0.26	-2.72	-248
Valeo SA	1.44	0.73	-6.85	-152
RENAULT	2.30	1.18	-2.19	-143
A2A SPA	3.99	0.51	4.40	-116

¹ The carbon footprint of the portfolio is computed based on the absolute carbon emissions of the companies adjusted to the positions of the portfolio

Return Analysis

	Neutral	Carbon Cost	Effective
Portfolio return	1.42	-0.18	1.24
Benchmark return	0.59	-0.33	0.26
Active return	0.83	0.15	0.98

Taking into account the cost of carbon yields lower returns. The carbon effect is thus negative at both portfolio and benchmark level. However the **active carbon effect** is positive because the portfolio is less exposed to carbon emitting companies

Carbon Attribution

	Neutral	Carbon	Effective
Allocation	0.22		0.36
Selection	0.61		0.62
Active return	0.83	0.15	0.98

Our carbon attribution methodology provides new insights to decipher the sources of the excess return. In the present case; reducing the allocation of the materials sector improved the allocation effect

Footprint Allocation

Return Decomposition
